Message:

Dear Mr. Potter:

This message is in response to the recent zoom meeting presentation regarding the proposed canal discharge outfall pipe. You said in this meeting for me to send you my questions and you would provide me with the answers.

Please express all statics using imperial measurements.

Buttermilk Bay:

1. List all sources of pollution to Buttermilk Bay by and with their volume and pollutant.
2. What are the average total volumes of water that Buttermilk Bay contains at high and at low tides?
3. What reduction of pollutants will be achieved from sewerage title 5 septic systems specific to Buttermilk Bay?
4. What is the breakdown between Wareham and Bourne Title 5 systems argued to be contributing to the pollution of Buttermilk Bay?

Downtown Buzzards Bay

1. Is the Wareham Wastewater Treatment plant currently treating sewerage from Bourne/Buzzards Bay? If so, what are the sources of this sewerage and volumes allotted for each source?
3. Are there current and pending plans to increase the amount of sewerage from Bourne/Buzzards Bay to be handled by the Wareham Wastewater Treatment plant? If so, please identify the current and proposed sources and the anticipated sewerage volumes required by/for each source.

Thank you,
John Bunevith
